

Digital Dashboard Program Assessment Tool

An automotive OEM wanted to centralize and standardize their program “health” status reporting against milestones.

Business Problem

Our client had various means of reporting program “health” status in different formats (MS Excel, MS PowerPoint, and custom web applications). Reporting standardization against program milestones was very difficult.

CGN Solution

CGN developed and implemented an enterprise, web-based digital dashboard to track and report out the detailed “health” status of their programs. The dashboard contains 15 separate topics or panels that are used as the primary indicators of the program status and as an aid in identifying and allocating resources to those functions.

Customer Benefit

The new dashboard aids in the review of program metrics, Red and Yellow issues, Job 1 risks, analysis of the impact of these risks and evaluation of recovery / contingency plans.

SCOPE

Design and develop an enterprise, web-based “health” status reporting system.

BUSINESS DRIVERS

Aid overall program management processes; raise visibility of high-risk program issues; ensure programs remain on track

TECHNOLOGY

ASP, Oracle, Microsoft Visual Studio, Microsoft IIS and PDF Reports
